

Diabetes online NDNKSF L1&2 module

For pharmacists and interns

The NDNKSF L1&2 module for healthcare professionals is to national standards and has evidence informed content, enabling healthcare professionals to provide consistent information to patients.

The module provides general and fundamental information at a clinical level. Along with the reading materials and formative self-tests, there is an opportunity to complete a summative assessment. It is regularly clinically reviewed by the New Zealand Society for the Study of Diabetes (NZSSD). For more information you can visit the health professionals section on the website.

Gain ENHANCE points

You are able to allocate 14 ENHANCE Group 2 points after successfully completing this learning module and the assessment. If you have not successfully completed the assessment, 7 ENHANCE Group 1 point may be allocated.

For pharmacy technicians

Technicians have access to the NDNKSF L1&2 module for healthcare professionals without the specific NDNKSF L1&2 assessment. However, there is a general assessment available on request.

For assistants and other pharmacy staff

There is a plain language module that covers all the basics for general pharmacy staff with an assessment that pharmacy staff can complete to demonstrate their learning.
